b) How far is the planet from Earth? _____

c) Who wrote the article? _____

d) When was the article published? _____

e) What is the name of the exoplanet? _____

New Planet with Water

By Lily Larson

Scientists find water on a distant exoplanet. The planet is named K2-18b. It is 111 (one hundred eleven) light years away.

It is the first exoplanet with water in its star's area where things can live. This means that there can be life on the planet. Next, scientists want to know what chemicals are around the planet.
